New TACs

Pleuronectes	Plaice (2)	VIIe	na	na		647
Pleuronectes	Plaice (2)	VIIId	na	na		4.018

(1) This TAC comprises multiple Norway lobster functional units (discrete aggregations). ICES/STECF advice is to manage them separately. This is an overall figure.

(2) These two TACs result from area rearrangement. Today's TAC for area "VII d and e" contains two stocks in different state. Splitting is necessary to cater for the specific situation of each.

(3) No targeted fishing on common skate or undulate ray.
